

DESIGN AND IMPLEMENTATION OF A DATABASE MANAGEMENT SYSTEM FOR VEHICLE SERVICE CENTRE MANAGEMENT SYSTEM

K. Devika
25WU0102120

PROBLEM STATEMENT

- Paper job cards can be misplaced and are difficult to retrieve.
 - The current servicing status of a vehicle is difficult to track.
 - Previous service and repair records are not easily available.
 - A mechanic may be assigned to overlapping repair tasks.
 - Spare-part stock and quantities used may not be recorded accurately.
 - Manual invoice calculations may cause delays and billing errors.
 - A centralized database is required to manage all service records accurately.
- 
- 

SCOPE OF THE PROJECT

- Register and maintain customer and vehicle details.
- Create service bookings and job cards.
- Record repair tasks and assign mechanics.
- Track vehicle inspections and servicing status.
- Manage spare-part stock and quantities used.
- Generate invoices and record customer payments.
- Retrieve vehicle service history and generate reports.

OBJECTIVES

- Develop a centralized database for all vehicle service records.
 - Track bookings, job cards, repair progress and mechanic assignments.
 - Maintain accurate spare-part stock and usage details.
 - Generate correct invoices, payments and service-history records.
 - Reduce data duplication, missing records and manual errors.
- 

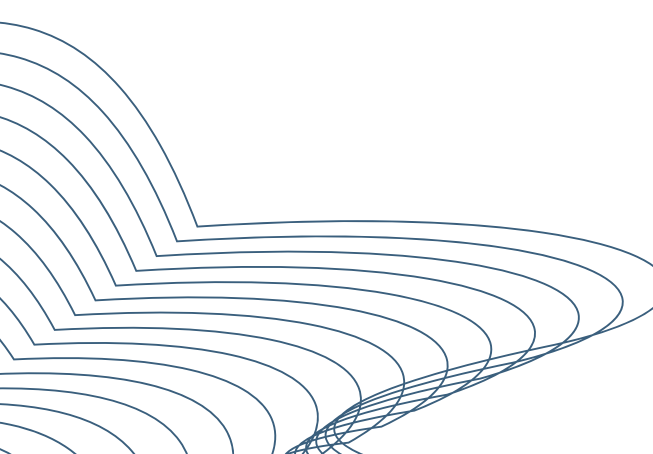

USERS OF THE SYSTEM

- Manager: Controls the system and views records and reports.
 - Service Advisor: Registers customers and vehicles, creates bookings and job cards.
 - Mechanic: Performs assigned repair tasks and updates their status.
 - Billing Staff: Generates invoices and records payments.
- 

FUNCTIONAL REQUIREMENTS

- Register and manage customer and vehicle details.
 - Create service bookings and process job cards.
 - Add repair tasks, record inspections and assign mechanics.
 - Issue spare parts and update their stock and usage.
 - Update service status and completion details.
 - Calculate invoices and record customer payments.
 - Search and display a vehicle's complete service history.
 - Generate reports on pending jobs, mechanic workload, spare-part usage, turnaround time and revenue.
- 

**THANK
YOU**
